## Electronic key

### The perfect mechanical and electronic combination

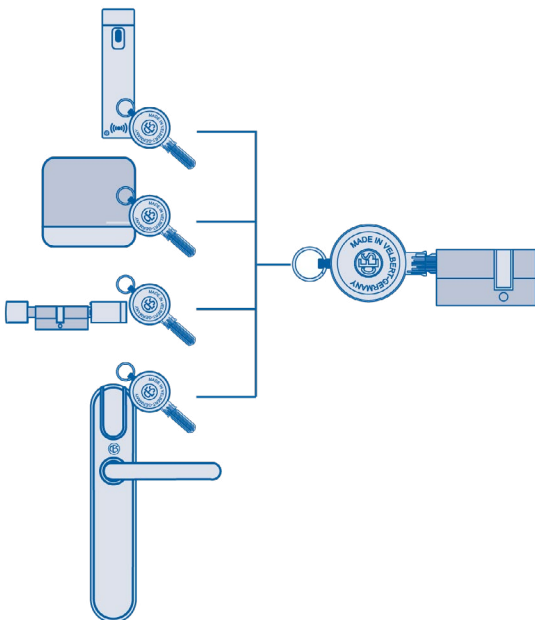

When electronic components are added to an existing mechanical master key system, the question arises of how to modify the locking medium. Is it a matter of issuing a card or chip in addition to the key? Our electronic key combines tried and trusted locking systems with up-to-date ID technology (MIFARE®/LEGIC).

## Operate mechanical and electronic locking devices with just one key

As well as traditional mechanical locking and unlocking, the locking medium integrated into the housing of the electronic key offers contactless control of the electronic components of a master key system. To do this, simply hold the key near the relevant device.

The key can easily be used in existing

master key systems with electronic devices and identical locking medium technology. This enables the electronic key to also be used in other systems, such as lift control systems, for time registration or for payment systems.

The electronic key is available in the following colours:  (Your choice of RAL colour for 500 units and above)

### Secure retention

360° pivoted keyring

### Distinctive design

High-quality plastic  
Comfortable grip  
Upper section of housing available in various RAL colours

### Compatibility

MIFARE Classic®  
MIFARE® DESFire® EV2

LEGIC prime  
LEGIC advant  
in line ISO 14443  
and ISO 15693

### Dimensions

Width/length: approx. 34x51 mm  
Height: approx. 9 mm
